# **KATANA Effect Parameter list**

## **BOOSTER**

Various boosters and distortion effects can be selected.

#### **BOOSTER Type**

| Туре   | Explanation   |  |  |
|--|---|--|--|
| CLEAN BOOST                                      | This not only functions as a booster, but also produces a clean tone that has punch even when used alone. |  |  |
| TREBLE BOOST                                     | This is a booster that has bright characteristics.  |  |  |
|  | This is a booster with unique characteristics in the midrange.  |  |  |
| MID BOOST  | Making the connection before the COSM amp produces sound suitable for solos.                              |  |  |
| CRUNCH OD  | A lustrous crunch sound with an added element of amp distortion.  |  |  |
|  | This is a crunch sound of the BOSS BD-2.  |  |  |
| BLUES DRIVE                                      | This produces distortion that faithfully reproduces the nuances of picking.                               |  |  |
| OVERDRIVE  | This models the sound of the BOSS OD-1.   |  |  |
| OVERDRIVE  | This produces sweet, mild distortion.   |  |  |
| NATURAL OD                                       | This is an overdrive sound that provides distortion with a natural feeling.                               |  |  |
| WARM OD  | This is a warm overdrive.   |  |  |
| TURBO OD   | This is the high-gain overdrive sound of the BOSS OD-2.   |  |  |
| T-SCREAM   | This models an Ibanez TS-808.   |  |  |
| DISTORTION                                       | This gives a basic, traditional distortion sound.   |  |  |
| FAT DS A distortion sound with thick distortion. |   |  |  |
| DST+   | This models a MXR DISTORTION+.  |  |  |
| GUV DS   | This models a Marshall GUV'NOR.   |  |  |
| RAT  | This models a Proco RAT.  |  |  |
| ·  | This models the sound of the BOSS MT-2.   |  |  |
| METAL ZONE                                       | It produces a wide range of metal sounds, from old style to slash metal.                                  |  |  |
| METAL DS   | This is distortion sound that is ideal for performances of heavy riffs.                                   |  |  |
| '60S FUZZ  | This models a FUZZFACE.   |  |  |
| 003 FUZZ   | It produces a fat fuzz sound.   |  |  |
| MUFF FUZZ  | This models an Electro-Harmonix Big Muff $\pi$ .  |  |  |
| OCT FUZZ   | A fuzz sound with rich harmonic content.  |  |  |

#### **BOOSTER Parameters**

| Parameter    | Value         | Explanation   |
|--------------|---------------|---|
| TYPE         | Refer to BOOS | TERType   |
| DRIVE        | 0–120         | Adjusts the depth of distortion.  |
| TONE         | -50-+50       | Adjusts the tone.   |
| воттом       | -50-+50       | Adjusts the tone for the low frequency range. Turning this to the left (counterclockwise) produces a sound with the low end cut; turning it to the right boosts the low end in the sound. |
| EFFECT LEVEL | 0–100         | Adjusts the volume of the effect sound.   |
| SOLO SW      | OFF, ON       | Switches to a tone that is suitable for solos.  |
| SOLO LEVEL   | 0–100         | Adjusts the volume level when the Solo Sw is ON.  |
| DIRECT MIX   | 0-100         | Adjusts the volume of the direct sound.   |

## MOD/FX

With MOD and FX, you can select the effect to be used from the following. You can select the same effect for MOD and FX.

#### Selecting the Type

#### MOD/FX Type

This is a list of the effects that can be selected for MOD/FX.

| Effect Name                             | Explanation  |  |
|---|--|--|
| CHORUS                                  | Frequency band division is employed to produce two different choruses, one for low frequencies and one for higher frequencies. This allows you to achieve a more natural chorus sound.                       |  |
| FLANGER                                 | The flanging effect gives a twisting, jet-airplane-like character to the sound.  |  |
| PHASER                                  | By adding varied-phase portions to the direct sound, the phaser effect gives a whooshing, swirling character to the sound.   |  |
| UNI-V                                   | This models a Uni-Vibe.  Although this resembles a phaser effect, it also provides a unique undulation that you can't get with a regular phaser.   |  |
| TREMOLO                                 | Tremolo is an effect that creates a cyclic change in volume.   |  |
| VIBRATO                                 | This effect creates vibrato by slightly modulating the pitch.  |  |
| ROTARY                                  | This produces an effect like the sound of a rotary speaker.  |  |
| RING MOD<br>(Ring Modulator)            | This creates a bell-like sound by ring-modulating the guitar sound with the signal from the internal oscillator. The sound can be unmusical and lack distinctive pitches.                                    |  |
| SLOW GEAR                               | This produces a volume-swell effect ("violin-like" sound).   |  |
| SLICER                                  | This consecutively interrupts the sound to create the impression that a rhythm backing phrase is being played.   |  |
| COMP<br>(Compressor)                    | This is an effect that produces a long sustain by evening out the volume level of the input signal. You can also use it as a limiter to suppress only the sound peaks and prevent distortion.                |  |
| LIMITER                                 | The limiter attenuates loud input levels to prevent distortion.  |  |
| T. WAH<br>(Touch Wah)                   | You can produce a wah effect with the filter changing in response to the guitar level.   |  |
| AUTO WAH                                | This changes the filtering over a periodic cycle, providing an automatic wah effect.   |  |
| PEDAL WAH                               | You can use an expression pedal connected to the FX jack on the rear panel of the GA-FC foot controller (sold separately) to control the wah effect in real time.  |  |
| GRAPHIC EQ<br>(Graphic Equalizer)       | Adjusts the tone. You can adjust the sound quality in ten bands.   |  |
| PARAMETRIC EQ<br>(Parametric Equalizer) | Adjusts the tone. You can adjust the sound quality in four bands.  |  |
| GUITAR SIM<br>(Guitar Simulator)        | Simulation of the characteristics of particular guitar components such as pickups and different guitar bodies allows you to switch among a number of different guitar types all while using a single guitar. |  |

#### **KATANA Effect Parameter list**

| Effect Name                                     | Explanation   |  |  |
|---|---|--|--|
| AC.GUITAR SIM<br>(Acoustic Guitar<br>Simulator) | This transforms the sound of an electric guitar into the sound of an acoustic guitar.   |  |  |
| AC. PROCESSOR<br>(Acoustic Processor)           | This processor allows you to change the sound produced by the pickup on an acoustic electric guitar, creating a richer sound similar to that obtained with a microphone placed close to the guitar. |  |  |
| WAVE SYNTH                                      | This is a synth sound that processes the guitar input signal.   |  |  |
| OCTAVE  | This adds a note one octave lower, creating a richer sound.   |  |  |
| PITCH SHIFTER                                   | This effect changes the pitch of the original sound (up or down within a range of two octaves.  |  |  |
| HARMONIST                                       | Harmonist is an effect where the amount of shifting is adjusted according to an analysis of the guitar input, allowing you to create harmony based on diatonic scales.                              |  |  |
| HUMANIZER                                       | This can create human vowel-like sounds.  |  |  |
| PHASER 90E                                      | This models an MXR EVH-90 Phase Shifter.  |  |  |
| FLANGER117E                                     | This models an MXR EVH-117 Flanger.   |  |  |

#### MOD/FX Efffect Parameters

## **CHORUS**

Frequency band division is employed to produce two different choruses, one for low frequencies and one for higher frequencies. This allows you to achieve a more natural chorus sound.

| Parameter                                      | Value              | Explanation   |
|--|--------------------|---|
| LOW RATE                                       | 0–100,             | Adjust the speed of the chorus effect for the low frequency range.  |
| LOW DEPTH                                      | 0–100              | Adjust the depth of the chorus effect for the low frequency range. If you wish to use this as a doubling effect, use a setting of 0.                        |
| LOW PRE DELAY                                  | 0.0 ms-40.0 ms     | Adjusts the delay of the effect sound in the low-frequency range. Extending the pre-delay will produce the sensation of multiple sounds (doubling effect).  |
| LOW LEVEL                                      | 0–100              | Adjusts the volume of the effect sound in the low-frequency range.  |
| DIRECT MIX                                     | 0–100              | Adjusts the volume of the direct sound.   |
| HIGH RATE                                      | 0–100,             | Adjust the speed of the chorus effect for the high frequency range.   |
| HIGH DEPTH                                     | 0–100              | Adjust the depth of the chorus effect for the high frequency range. If you wish to use this as a doubling effect, use a setting of 0.                       |
| HIGH PRE DELAY                                 | 0.0 ms-40.0 ms     | Adjusts the delay of the effect sound in the high-frequency range. Extending the pre-delay will produce the sensation of multiple sounds (doubling effect). |
| HIGH LEVEL                                     | 0–100              | Adjusts the volume of the effect sound in the high-frequency range.   |
| XOVER<br>FREQUENCY<br>(CROSSOVER<br>FREQUENCY) | 100 Hz-4.00<br>kHz | This sets the frequency dividing the low- and high-frequency ranges.  |

## **FLANGER**

The flanging effect gives a twisting, jet-airplane-like character to the sound.

| Parameter           | Value                 | Explanation   |
|---------------------|-----------------------|---|
| RATE                | 0-100                 | This sets the rate of the flanging effect.  |
| DEPTH               | 0-100                 | Determines the depth of the flanging effect.  |
| RESO<br>(RESONANCE) | 0–100                 | Determines the amount of resonance (feedback).<br>Increasing the value will emphasize the effect,<br>creating a more unusual sound.         |
| MANUAL              | 0-100                 | Adjusts the center frequency at which to apply the effect.  |
| EFFECT LEVEL        | 0-100                 | Adjusts the volume of the flanger.  |
| LOW CUT             | FLAT,<br>55 Hz-800 Hz | This sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect. |
| DIRECT MIX          | 0-100                 | Adjusts the volume of the direct sound.   |

#### **PHASER**

By adding varied-phase portions to the direct sound, the phaser effect gives a whooshing, swirling character to the sound.

| Parameter           | Value   | Explanation   |  |
|---------------------|---|---|--|
|                     | Selects the number of stages that the phaser effect will use. |   |  |
|                     | 4 STAGE   | This is a four-phase effect. A light phaser effect is obtained.   |  |
| TYPE                | 8 STAGE   | This is a eight-phase effect. It is a popular phaser effect.  |  |
|                     | 12 STAGE  | This is a twelve-phase effect. A deep phase effect is obtained.   |  |
|                     | BiPHASE   | This is the phaser with two phase shift circuits connected in series.   |  |
| RATE                | 0–100   | This sets the rate of the phaser effect.  |  |
| DEPTH               | 0–100   | Determines the depth of the phaser effect.  |  |
| RESO<br>(RESONANCE) | 0–100   | Determines the amount of resonance (feedback).<br>Increasing the value will emphasize the effect, creating<br>a more unusual sound.   |  |
| MANUAL              | 0–100   | Adjusts the center frequency of the phaser effect.  |  |
| EFFECT LEVEL        | 0–100   | Adjusts the volume of the phaser.   |  |
| STEP RATE           | OFF,<br>0–100   | This sets the cycle of the step function that changes the rate and depth. When it is set to a higher value, the change will be finer. Set this to "Off" when not using the Step function. |  |
| DIRECT MIX          | 0–100   | Adjusts the volume of the direct sound.   |  |

### UNI-V

This models a Uni-Vibe.

Although this resembles a phaser effect, it also provides a unique undulation that you can't get with a regular phaser.

| Parameter | Value | Explanation                            |  |
|-----------|-------|--|--|
| RATE      | 0–100 | Adjusts the rate of the UNI-V effect.  |  |
| DEPTH     | 0-100 | Adjusts the depth of the UNI-V effect. |  |
| LEVEL     | 0-100 | Adjusts the volume.                    |  |

### **TREMOLO**

Tremolo is an effect that creates a cyclic change in volume.

| Parameter  | Value | Explanation  |
|------------|-------|--|
| WAVE SHAPE | 0–100 | Adjusts changes in volume level. A higher value will steepen wave's shape. |
| RATE       | 0-100 | Adjusts the frequency (speed) of the change.                               |
| DEPTH      | 0-100 | Adjusts the depth of the effect.   |
| LEVEL      | 0-100 | Adjusts the volume.  |

### **VIBRATO**

This effect creates vibrato by slightly modulating the pitch.

| Parameter | Value | Explanation                       |
|-----------|-------|-----------------------------------|
| RATE      | 0-100 | Adjusts the rate of the vibrato.  |
| DEPTH     | 0-100 | Adjusts the depth of the vibrato. |
| LEVEL     | 0-100 | Adjusts the volume.               |

### **ROTARY**

This produces an effect like the sound of a rotary speaker.

| Parameter | Value | Explanation                                       |  |
|-----------|-------|---|--|
| RATE      | 0-100 | Adjusts the speed of the rotation.                |  |
| DEPTH     | 0-100 | Adjusts the amount of depth in the rotary effect. |  |
| LEVEL     | 0-100 | Adjusts the volume.                               |  |

### **RING MOD**

The sound can be unmusical and lack distinctive pitches.

| Parameter    | Value            | Explanation  |
|--------------|------------------|--|
|              | This selects the | e mode for the ring modulator.   |
|              | NORMAL           | This is a normal ring modulator.   |
| MODE         | INTELLIGENT      | By ring-modulating the input signal, a bell like sound is created. The intelligent ring modulator changes the oscillation frequency according to the pitch of the input sound and therefore produces a sound with the sense of pitch, which is quite different from NORMAL. This effect does not give a satisfactory result if the pitch of the guitar sound is not correctly detected. So, you must use single notes, not chords. |
| FREQUENCY    | 0–100            | Adjusts the frequency of the internal oscillator.  |
| EFFECT LEVEL | 0-100            | Adjusts the volume of the effect sound.  |
| DIRECT MIX   | 0-100            | Adjusts the volume of the direct sound.  |

### **SLOW GEAR**

This produces a volume-swell effect ("violin-like" sound).

| Parameter | Value | Explanation  |  |
|-----------|-------|--|--|
| SENS      | 0–100 | Adjusts the sensitivity of the slow gear. When it is set to a lower value, the effect of the slow gear can be obtained only with a stronger picking, while no effect is obtained with a weaker picking. When the value is set higher, the effect is obtained even with a weak picking. |  |
| RISE TIME | 0-100 | Adjusts the time needed for the volume to reach its maximum from the moment you begin picking.   |  |
| LEVEL     | 0-100 | Adjusts the volume of the effect sound.  |  |

## **SLICER**

This consecutively interrupts the sound to create the impression that a rhythm backing phrase is being played.

| Parameter    | ameter Value Explanation                              |   |
|--------------|---|---|
| PATTERN      | P1-P20  | Select the slice pattern that will be used to cut the sound.  |
| RATE         | 0–100 Adjust the rate at which the sound will be cut. |   |
|              |   | Adjust the sensitivity of triggering.   |
| TRIGGER SENS | 0–100   | With low settings of this parameter, softly picked notes will not retrigger the phrase (i.e., the phrase will continue playing), but strongly picked notes will retrigger the phrase so that it will playback from the beginning. With high settings of this parameter, the phrase will be retriggered even by softly picked notes. |
| EFFECT LEVEL | 0-100   | Adjusts the volume of the effect sound.   |
| DIRECT MIX   | T MIX 0–100 Adjusts the volume of the direct sound.   |   |

### **COMP**

This is an effect that produces a long sustain by evening out the volume level of the input signal. You can also use it as a limiter to suppress only the sound peaks and prevent distortion.

| Parameter | Value     | Explanation  |  |
|-----------|-----------|--|--|
|           | BOSS COMP | This models a BOSS CS-3.   |  |
|           | HI-BAND   | This is a compressor that adds an even stronger effect in the high end.  |  |
|           | LIGHT     | This is a compressor with a light effect.  |  |
|           | D-COMP    | This models a MXR DynaComp.  |  |
| TYPE      | ORANGE    | This is modeled on the sound of the Dan Armstrong ORANGE SQUEEZER.   |  |
|           | FAT       | When applied heavily, this compressor effect provides a fat tone with a boosted midrange.  |  |
|           | MILD      | When applied heavily, this compressor effect produces a sweet tone with the high end cut.  |  |
| SUSTAIN   | 0–100     | Adjusts the range (time) over which low-level signals are boosted. Larger values will result in longer sustain.  |  |
| ATTACK    | 0–100     | Adjusts the strength of the picking attack when the strings are played. Higher values result in s sharper attack, creating a more clearly defined sound. |  |
| LEVEL     | 0-100     | Adjusts the volume.  |  |
| TONE      | -50-+50   | Adjusts the tone.  |  |

## LIMITER

The limiter attenuates loud input levels to prevent distortion.

| Parameter | Value                          | Explanation   |  |
|-----------|--------------------------------|---|--|
|           | Selects the limiter type.      |   |  |
|           | BOSS LIMITER                   | This selects a stereo limiter.  |  |
| TYPE      | RACK 160D                      | This models a dbx 160X.   |  |
|           | VTG RACK U<br>(VINTAGE RACK U) | This models a UREI 1178.  |  |
| THRESHOLD | 0–100                          | Adjust this as appropriate for the input signal from your guitar. When the input signal level exceeds this threshold level, limiting will be applied.             |  |
| RATIO     | 1:1-INF:1                      | This selects the compression ratio used with signals in excess of the threshold level.  |  |
| ATTACK    | 0–100                          | Adjusts the strength of the picking attack when<br>the strings are played. Higher values result in s<br>sharper attack, creating a more clearly defined<br>sound. |  |
| RELEASE   | 0–100                          | Adjusts the release time.   |  |
| LEVEL     | 0-100                          | Adjusts the volume.   |  |

## T. WAH

You can produce a wah effect with the filter changing in response to the guitar level.

| Parameter    | Value   | Explanation  |  |  |
|--------------|---|--|--|--|
|              | Selects the wah mode.                         |  |  |  |
| MODE         | LPF   | Low pass filter. This provides a wah effect over a wide frequency range.   |  |  |
|              | BPF   | Band pass filter. This provides a wah effect in a narrow frequency range.  |  |  |
|              | Selects the inpu                              | the direction in which the filter will change in response to<br>ut.  |  |  |
| POLAR        | DOWN  | The frequency of the filter will fall.   |  |  |
|              | UP  | The frequency of the filter will rise.   |  |  |
|              | 0–100   | Specifies the sensitivity with which the filter changes in the direction specified by the POLAR setting.   |  |  |
| SENS         |   | Higher values will produce a stronger tone which emphasizes the wah effect more. With a setting of 0, the strength of picking will have no effect.   |  |  |
| FREQ         | 0-100   | Adjusts the center frequency of the Wah effect.  |  |  |
| PEAK         | 0-100   | Adjusts the way in which the wah effect applies to the area around the center frequency.  Higher values will produce a stronger tone which emphasizes the wah effect more. With a value of 50 a standard wah sound will be produced. |  |  |
| EFFECT LEVEL |   |  |  |  |
| DIRECT MIX   | 0–100 Adjusts the volume of the direct sound. |  |  |  |

### **AUTO WAH**

This changes the filtering over a periodic cycle, providing an automatic wah effect.

| Parameter    | Value                 | Explanation  |  |
|--------------|-----------------------|--|--|
|              | Selects the wah mode. |  |  |
| MODE         | LPF                   | Low pass filter. This provides a wah effect over a wide frequency range.   |  |
|              | BPF                   | Band pass filter. This provides a wah effect in a narrow frequency range.  |  |
| RATE         | 0–100                 | Adjusts the frequency (speed) of the change.   |  |
| DEPTH        | 0–100                 | Adjusts the depth of the effect.   |  |
| FREQ         | 0-100                 | Adjusts the center frequency of the Wah effect.  |  |
|              | 0–100                 | Adjusts the way in which the wah effect applies to the area around the center frequency.   |  |
| PEAK         |                       | Higher values will produce a stronger tone which emphasizes the wah effect more. With a value of 50 a standard wah sound will be produced. |  |
| EFFECT LEVEL | 0-100                 | Adjusts the volume of the effect sound.  |  |
| DIRECT MIX   | 0-100                 | Adjusts the volume of the direct sound.  |  |

## PEDAL WAH

You can control the wah effect in real time by adjusting the expression pedal connected to the FX jack on the rear panel of the GA-FC foot controller (sold separately).

| D .              | V 1                   | - 1  |  |
|------------------|-----------------------|--|--|
| Parameter        | Value                 | Explanation  |  |
|                  | Selects the wah mode. |  |  |
|                  | CRY WAH               | This models the sound of the CRY BABY wah pedal popular in the '70s.   |  |
|                  | VO WAH                | This models the sound of the VOX V846.   |  |
|                  | FAT WAH               | This is a wah sound featuring a bold tone.   |  |
| TYPE             | LIGHT WAH             | This wah has a refined sound with no unusual characteristics.  |  |
|                  | 7STRING WAH           | This expanded wah features a variable range compatible with seven-string and baritone guitars.                         |  |
|                  | RESO WAH              | This completely original effect offers enhancements on the characteristic resonances produced by analog synth filters. |  |
| PEDAL POS        |                       | Adjusts the position of the wah pedal.   |  |
| (PEDAL POSITION) | 0–100                 | * This parameter is used after it's been assigned to an EXP Pedal or similar controller.                               |  |
| PEDAL MIN        | 0–100                 | Selects the tone produced when the heel of the EXP Pedal is depressed.   |  |
| PEDAL MAX        | 0–100                 | Selects the tone produced when the toe of the EXP Pedal is depressed.  |  |
| EFFECT LEVEL     | 0-100                 | Adjusts the volume of the effect sound.  |  |
| DIRECT MIX       | 0-100                 | Adjusts the volume of the direct sound.  |  |

## **GRAPHIC EQ**

This adjusts the tone. You can adjust the sound quality in ten bands.

| Value        |
|--------------|
|              |
|              |
|              |
|              |
| 20 . 20 . 10 |
| -20-+20 dB   |
|              |
|              |
|              |
|              |
| -20-+20 dB   |
|              |

## PARAMETRIC EQ

This adjusts the tone. You can adjust the sound quality in four bands.

| Parameter                          | Value              | Explanation   |
|------------------------------------|--------------------|---|
| LOW GAIN                           | -20-+20 dB         | Adjusts the low frequency range tone.   |
| LOW-MID GAIN                       | -20-+20 dB         | Adjusts the low-middle frequency range tone.  |
| HIGH-MID GAIN                      | -20-+20 dB         | Adjusts the high-middle frequency range tone.   |
| HIGH GAIN                          | -20-+20 dB         | Adjusts the high frequency range tone.  |
| LEVEL                              | -20-+20 dB         | Adjusts the overall volume level of the equalizer.  |
| LOW-MID FREQUENCY                  | 20 Hz–10.0 kHz     | Specifies the center of the frequency range that will be adjusted by the LOW-MID GAIN.  |
| LOW-MID Q                          | 0.5–16             | Adjusts the width of the area affected by the EQ centered at the LOW-MID FREQ. Higher values will narrow the area.                            |
| HIGH-MID FREQUENCY                 | 20 Hz–10.0 kHz     | Specifies the center of the frequency range that will be adjusted by the HIGH-MID GAIN.   |
| HIGH-MID Q                         | 0.5–16             | Adjusts the width of the area affected by the EQ centered at the HIGH-MID FREQ. Higher values will narrow the area.                           |
| LOW CUT                            | FLAT, 20 Hz-800 Hz | This sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect.   |
| HIGH CUT 630 Hz-<br>12.5 kHz, FLAT |                    | This sets the frequency at which the high cut filter begins to take effect. When "FLAT" is selected, the high cut filter will have no effect. |

### **GUITAR SIM**

Simulation of the characteristics of particular guitar components such as pickups and different guitar bodies allows you to switch among a number of different guitar types all while using a single guitar.

| Parameter | Value                           | Explanation   |
|-----------|---------------------------------|---|
|           | Selects the type                | e of the guitar simulator.  |
|           | S → H                           | Changes from a single-coil pickup tone to a humbucking pickup tone.   |
|           | H→S                             | Changes from a humbucking pickup tone to a single-coil pickup tone.   |
|           | H → HF<br>(HALF TONE)           | Changes from a humbucking pickup tone to a single-coil pickup half tone.  |
|           | S → HOLLOW                      | Changes a single-coil pickup tone to a hollow body tone with the body resonance added.  |
| TYPE      | H → HOLLOW                      | Changes a humbucking pickup tone to a hollow body tone with the body resonance added.   |
|           | S → AC<br>(ACOUSTIC)            | Changes a single-coil pickup tone to an acoustic guitar tone.   |
|           | H → AC<br>(ACOUSTIC)            | Changes a humbucking pickup tone to an acoustic guitar tone.  |
|           | P → AC<br>(PIEZO<br>→ ACOUSTIC) | Changes a piezo pickup tone to an acoustic guitar tone.   |
| LOW       | -50-+50                         | Adjusts the low frequency range tone.   |
| HIGH      | -50-+50                         | Adjusts the high frequency range tone.  |
| BODY      | 0-100                           | Adjusts the way the body sounds when TYPE is set to S $\rightarrow$ HOLLOW, H $\rightarrow$ HOLLOW, S $\rightarrow$ AC, H $\rightarrow$ AC or P $\rightarrow$ AC. |
| ворі      | 0-100                           | The body sound increases as the value is raised; reducing the value produces a tone similar to that from a piezo pickup.  |
| LEVEL     | 0–100                           | Adjusts the volume of the effect sound.   |

#### AC. GUITAR SIM

This effect simulates the tonal character of an acoustic guitar.

| Parameter | Value   | Explanation   |  |
|-----------|---------|---|--|
| BODY      | 0-100   | Adjusts the body resonance.                                 |  |
| LOW       | -50-+50 | Specifies the sense of volume for the low-frequency range.  |  |
| HIGH      | -50-+50 | Specifies the sense of volume for the high-frequency range. |  |
| LEVEL     | 0-100   | Specifies the volume of the effect.                         |  |

### AC. PROCESSOR

This processor allows you to change the sound produced by the pickup on an acoustic electric guitar, creating a richer sound similar to that obtained with a microphone placed close to the guitar.

| Parameter   | Value                      | Explanation   |  |
|-------------|----------------------------|---|--|
|             | Selects the modeling type. |   |  |
|             | SMALL                      | This is the sound of a small-bodied acoustic guitar.      |  |
| TYPE        | MEDIUM                     | This is a standard, unadorned acoustic guitar sound.      |  |
|             | BRIGHT                     | This is a bright acoustic guitar sound.                   |  |
|             | POWER                      | This is a powerful acoustic guitar sound.                 |  |
| BASS        | -50-+50                    | Adjusts the tone for the low frequency range.             |  |
| MIDDLE      | -50-+50                    | Adjusts the midrange balance.                             |  |
| TREBLE      | -50-+50                    | Adjusts the tone for the high frequency range.            |  |
| PRESENCE    | -50-+50                    | Adjusts the balance in the extended upper range.          |  |
| LEVEL       | 0-100                      | Adjusts the volume.                                       |  |
| MIDDLE FREQ | 20.0 Hz-10.0<br>kHz        | Specifies the frequency range to be adjusted with Middle. |  |

### **WAVE SYNTH**

This is a synth sound that processes the guitar input signal.

- \* When you use a wave synthesizer, observe the following points.
- Because of the need to analyze the pitch, chords (two or more sounds played simultaneously) cannot be played. Be sure to mute all the other strings and play only one note at a time.
- If the unit cannot detect the attack, it may not sound correctly. If the unit cannot detect the attack, it may not sound correctly.
- The sensitivity may vary according to the guitar's TONE knob and pickup type.

| Parameter    | Value Explanation                                   |   |  |
|--------------|---|---|--|
|              | Selects a wave type which the synth sound is based. |   |  |
| WAVF         | SAW   | Creates a synth sound with a saw waveform ( ///// ).  |  |
|              | SQUARE  | Creates a synth sound with the square waveform (  |  |
| CUTOFF       | 0–100   | Adjusts the frequency where the harmonics contents of the sound are cut off.  |  |
| RESONANCE    | 0–100   | Adjusts the amount of resonance (and the tone coloration) in the synth sound. The higher the value, the more the synth tone coloration is emphasized. |  |
| SYNTH LEVEL  | 0-100   | Adjusts the volume of the synth sound.  |  |
| FILTER SENS  | 0–100   | Adjusts the amount of filtering applied in response to the input.   |  |
| FILTER DECAY | 0–100   | This sets the time needed for the filter to finish its sweep.   |  |
| FILTER DEPTH | 0–100   | Adjusts the depth of the filter. When the value is higher, the filter will change more drastically.   |  |
| DIRECT MIX   | 0-100   | Adjusts the volume of the direct sound.   |  |

### **OCTAVE**

This adds a note one octave lower, creating a richer sound.

| Parameter    | Value   | Explanation   |  |
|--------------|---|---|--|
|              | This selects the register to which the effect is applied. |   |  |
|              | RANGE 1 (B1–E6)   | B1 (corresponds to the sound of an open 7th string) to E6 (corresponds to the 1st string played at the 24th fret) |  |
| RANGE        | RANGE 2 (B1–E5)   | B1 (corresponds to the sound of an open 7th string) to E5 (corresponds to the 1st string played at the 12th fret) |  |
|              | RANGE 3 (B1–E4)   | B1 (corresponds to the sound of an open 7th string) to E4 (corresponds to the sound of an open 1st string)        |  |
|              | RANGE 4 (B1–E3)   | B1 (corresponds to the sound of an open 7th string) to E3 (corresponds to the 4th string played at the 2nd fret)  |  |
| EFFECT LEVEL | 0–100   | Adjusts the volume of the sound one octave below.   |  |
| DIRECT MIX   | 0–100   | Adjusts the volume of the direct sound.   |  |

#### **PITCH SHIFTER**

This effect changes the pitch of the original sound (up or down) within a range of two octaves.

| Parameter                      | Value                    | Explanation   |
|--------------------------------|--------------------------|---|
| Parameter                      |                          | imber of voices for the pitch shift sound.  |
| VOICE                          | 1VOICE                   | One-voice pitch-shifted sound output in monaural.   |
|                                | 2VOICE                   | Two-voice pitch-shifted sound (PS1, PS2) output in monaural.  |
| PS1:PITCH<br>PS2:PITCH         | -24-+24                  | Adjusts the amount of pitch shift (the amount of interval) in semitone steps.   |
| 1:LEVEL<br>2:LEVEL             | 0–100                    | Adjusts the volume of the pitch shifter.  |
| DIRECT MIX                     | 0-100                    | Adjusts the volume of the direct sound.   |
|                                | Selection for t          | he pitch shifter mode.  |
| PS1:MODE                       | FAST,<br>MEDIUM,<br>SLOW | The response is slower in the order of FAST,<br>MEDIUM and SLOW, but the modulation is<br>lessened in the same order.   |
| PS2:MODE                       |                          | MONO is used for inputting single notes.  |
|                                | MONO                     | * You may be unable to produce the intended effect when playing chords (two or more notes played simultaneously).   |
| PS1:FINE<br>PS2:FINE           | -50-+50                  | Make fine adjustments to the interval. The amount of the change in the Fine 100 is equivalent to that of the Pitch 1.   |
| PS1:PRE DELAY<br>PS2:PRE DELAY |                          | Adjusts the time from when the direct sound is heard until the pitch shifted sounds are heard. Normally you can leave this set at 0 ms.   |
|                                | 0 ms-300 ms              | * When set to BPM, the value of each parameter will be set according to the value of the "MASTER BPM" specified for each patch. This makes it easier to achieve effect sound settings that match the tempo of the song. |
|                                |                          | * If, due to the tempo, the time is longer than<br>the range of allowable settings, it is then<br>synchronized to a period either 1/2 or 1/4 of<br>that time.   |
| PS1:FEEDBACK                   | 0–100                    | Adjusts the feedback amount of the pitch shift sound.   |

### **HARMONIST**

Harmonist is an effect where the amount of shifting is adjusted according to an analysis of the guitar input, allowing you to create harmony based on diatonic scales.

- \* Because of the need to analyze the pitch, chords (two or more sounds played simultaneously) cannot be played. Be sure to mute all the other strings and play only one note at a time.
- \* If the unit cannot detect the attack, it may not sound correctly. If the unit cannot detect the attack, it may not sound correctly.
- \* The sensitivity may vary according to the guitar's TONE knob and pickup type.

| Parameter                      | Value   | Explanation   |  |
|--------------------------------|---|---|--|
|                                | Selects the number of voices for the pitch shift sound. |   |  |
| VOICE                          | 1VOICE  | One pitch-shifted voice is output in monaural.  |  |
|                                | 2VOICE  | Two pitch-shifted voices are output in monaural.  |  |
| HR1:HARMONY<br>HR2:HARMONY     | -2 oct-+2<br>oct, USER                                  | This determines the pitch of the sound added to the input sound, when you are making a harmony.  It allows you to set it by up to 2 octaves higher or lower than the input sound. When the scale is set to USER, this parameter sets the user scale number to be used.                                  |  |
| MASTER KEY                     | C (Am)-B<br>(G#m)                                       | The key setting corresponds to the key of the song (#, b) as follows.  Major C F B <sup>b</sup> E <sup>b</sup> A <sup>b</sup> D <sup>b</sup> Minor Am Dm Gm Cm Fm B <sup>b</sup> m  Major C G D A E B F <sup>‡</sup> Minor Am Em Bm F <sup>‡</sup> m C <sup>†</sup> m G <sup>†</sup> m D <sup>†</sup> m |  |
| DIR.MIX<br>(DIRECT MIX)        | 0–100   | Adjusts the volume of the direct sound.   |  |
| HR1:PRE DELAY<br>HR2:PRE DELAY | 0 ms-300<br>ms,   | Adjusts the time from when the direct sound is heard until the harmonist sounds are heard. Normally you can leave this set at 0 ms.   |  |
| HR1:FEEDBACK                   | 0-100   | Adjusts the feedback amount of the harmonist sound.   |  |
| HR1:LEVEL<br>HR2:LEVEL         | 0–100   | Adjusts the volume of the harmony sound.  |  |

| Parameter           |    | Value                            | Explanation                          |
|---------------------|----|----------------------------------|--------------------------------------|

- \*1 This can be specified if HR1:HARMONY or HR2:HARMONY is "USER."
- \*2 The correspondence between the note names and the knobs differs depending on the specified KEY. Knob [1] of the first page is the tonic (root note) of the specified KEY. The table shows the example of when KEY is set to C (Am).

### **HUMANIZER**

This can create human vowel-like sounds.

| Parameter | Value  | Explanation   |  |
|-----------|--|---|--|
|           | This sets the mode that switches the vowels. |   |  |
| MODE      | PICKING                                      | It changes from VOWEL 1 to VOWEL 2 along with the picking. The time spent for the change is adjusted with the rate.   |  |
|           | AUTO   | By adjusting the rate and depth, two vowels (VOWEL 1 and VOWEL 2) can be switched automatically.  |  |
| VOWEL 1   | a, e, i, o, u                                | Selects the first vowel.  |  |
| VOWEL 2   | a, e, i, o, u                                | Selects the second vowel.   |  |
| RATE      | 0-100  | Adjusts the cycle for changing the two vowels.  |  |
| DEPTH     | 0-100  | Adjusts the depth of the effect.  |  |
| LEVEL     | 0-100  | Adjusts the volume.   |  |
| SENS *1   | 0–100  | Adjusts the sensitivity of the humanizer. When it is set to a lower value, no effect of the humanizer is obtained with weaker picking, while stronger picking produces the effect. When it is set to a higher value, the effect of the humanizer can be obtained whether the picking is weak or strong. |  |
| MANUAL *2 | 0–100  | Adjusts the cycle for changing the two vowels. When it is set to lower than 50, the time for VOWEL 1 is shorter. When it is set to higher than 50, the time for VOWEL 1 is longer.  |  |

<sup>\*1</sup> Setting available when MODE is set to PICKING.

### PHASER 90E

This models an MXR EVH-90 Phase Shifter.

| Parameter | Value   | Explanation                                       |
|-----------|---------|---|
|           |         | Switches the character of the phaser.             |
| SCRIPT    | OFF, ON | OFF: Modern                                       |
|           |         | ON: Vintage                                       |
| SPEED     | 0-100   | Sets the rate and the depth of the phaser effect. |

## FLANGER117E

This models an MXR EVH-117 Flanger.

| Parameter | Value | Explanation   |
|-----------|-------|---|
| MANUAL    | 0–100 | Adjusts the center frequency at which to apply the effect.  |
| WIDTH     | 0-100 | Determines the depth of the flanging effect.  |
| SPEED     | 0-100 | This sets the rate of the flanging effect.  |
| REGEN.    | 0–100 | Determines the amount of feedback. Increasing the value will emphasize the effect, creating a more unusual sound. |

## DELAY/DELAY 2

This effect adds delayed sound to the direct sound, giving more body to the sound or creating special effects.

#### **DELAY Type**

| TYPE      | Explanation   |
|-----------|---|
| DIGITAL   | This is a simple monaural delay.  |
| ANALOG    | This gives a mild analog delay sound.                                     |
| TAPE ECHO | This setting provides the characteristic wavering sound of the tape echo. |
| REVERSE   | This produces an effect where the sound is played back in reverse.        |
| MODULATE  | This delay adds a pleasant wavering effect to the sound.                  |
| SDE-3000  | This models the sound of the Roland SDE-3000.                             |

#### **DELAY Parameters**

| Parameter         | Value                     | Explanation   |
|-------------------|---------------------------|---|
| TYPE              | Refer to DELAY            | Туре  |
| DELAY TIME        | 1 ms-2000 ms              | Adjusts the delay time.   |
| FEEDBACK          | 0–100                     | Adjusts the volume that is returned to the input.<br>A higher value will increase the number of the<br>delay repeats.                         |
| HIGH CUT          | 630 Hz–<br>12.5 kHz, FLAT | This sets the frequency at which the high cut filter begins to take effect. When "FLAT" is selected, the high cut filter will have no effect. |
| EFFECT LEVEL      | 0–120                     | Adjusts the volume of the delay sound.  |
| DIRECT MIX        | 0-100                     | Adjusts the volume of the direct sound.   |
| MODULATION        | 0–100                     | Adjusts the modulation rate of the delay sound.   |
| RATE              | 0-100                     | * Only when TYPE is MODULATE or SDE-3000.   |
| MODULATION        | 0–100                     | Adjusts the modulation depth of the delay sound   |
| DEPTH             |                           | * Only when TYPE is MODULATE or SDE-3000.   |
| MODULATION        | OFF, ON                   | Turns the modulation on/off.  |
| SW                |                           | * Only when TYPE is SDE-3000.   |
|                   |                           | Turns the filter on/off.  |
| FILTER            | OFF, ON                   | * If this is on, a natural-sounding effect is<br>obtained when you're using the delay as an<br>echo.  |
|                   |                           | * Only when TYPE is SDE-3000.   |
| RANGE             | 8kHz, 17kHz               | * Models the way in which the SDE-3000's<br>frequency response is affected by the delay<br>range.   |
| -                 |                           | * Only when TYPE is SDE-3000.   |
| DELAY PHASE       | NORMAL, INV               | Specifies the phase of the delay sound. Selecting INV inverts the phase.  |
|                   |                           | * Only when TYPE is SDE-3000.   |
| FEEDBACK<br>PHASE | NORMAL, INV               | Specifies the phase of the delay sound feedback.<br>Selecting INV inverts the phase.  |
|                   |                           | * Only when TYPE is SDE-3000.   |

<sup>\*2</sup> Setting available when MODE is set to AUTO.

## **REVERB**

This effect adds reverberation to the sound.

#### **REVERB Type**

| TYPE     | Explanation   |
|----------|---|
| PLATE    | Simulates plate reverberation (a reverb unit that uses the vibration of a metallic plate). Provides a metallic sound with a distinct upper range. |
| ROOM     | Simulates the reverberation in a small room. Provides warm reverberations.  |
| HALL 1   | Simulates the reverberation in a concert hall. Provides clear and spacious reverberations.  |
| SPRING   | This simulates the sound of a guitar amp's built-in spring reverb.  |
| MODULATE | This reverb adds the wavering sound found in hall reverb to provide an extremely pleasant reverb sound.   |

#### **REVERB Parameters**

| Parameter                              | Value                     | Explanation   |  |
|--|---------------------------|---|--|
| TYPE                                   | Refer to REVERB Type      |   |  |
| REVERB TIME                            | 0.1 s-10.0 s              | Adjusts the length (time) of reverberation.   |  |
| PRE DELAY                              | 0 ms-500 ms               | Adjusts the time until the reverb sound appears.  |  |
| EFFECT LEVEL                           | 0-100                     | Adjusts the volume of the reverb sound.   |  |
| DIRECT MIX                             | 0-100                     | Adjusts the volume of the direct sound.   |  |
| LOW CUT                                | FLAT,<br>20 Hz–800 Hz     | This sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect.   |  |
| HIGH CUT                               | 630 Hz–<br>12.5 kHz, FLAT | This sets the frequency at which the high cut filter begins to take effect. When "FLAT" is selected, the high cut filter will have no effect. |  |
| DENSITY                                | 0–10                      | Adjusts the density of the reverb sound.  |  |
| SPRING SENS<br>(TYPE =<br>SPRING only) | 0–100                     | Adjusts the sensitivity of the spring effect. When the value is set higher, the effect is obtained even with a weak picking.                  |  |

## **EQ (PARAMETRIC EQ)**

This adjusts the tone. You can adjust the sound quality in four bands.

| Parameter           | Value          | Explanation   |
|---------------------|----------------|---|
| ON/OFF              | OFF, ON        | Turns this effect on/off.   |
| LOW GAIN -20-+20 dB |                | Adjusts the low frequency range tone.   |
| LOW-MID GAIN        | -20-+20 dB     | Adjusts the low-middle frequency range tone.  |
| HIGH-MID GAIN       | -20-+20 dB     | Adjusts the high-middle frequency range tone.   |
| HIGH GAIN           | -20-+20 dB     | Adjusts the high frequency range tone.  |
| LEVEL               | -20-+20 dB     | Adjusts the overall volume level of the equalizer.  |
| LOW-MID FREQUENCY   | 20 Hz–10.0 kHz | Specifies the center of the frequency range that will be adjusted by the LOW-MID GAIN.                                      |
| LOW-MID Q           | 0.5–16         | Adjusts the width of the area<br>affected by the EQ centered at the<br>LOW-MID FREQ. Higher values will<br>narrow the area. |
| HIGH-MID FREQUENCY  | 20 Hz–10.0 kHz | Specifies the center of the frequency range that will be adjusted by the HIGH-MID GAIN.                                     |

| Parameter  | Value                     | Explanation   |
|------------|---------------------------|---|
| HIGH-MID Q | 0.5–16                    | Adjusts the width of the area affected by the EQ centered at the HIGH-MID FREQ. Higher values will narrow the area.                           |
| LOW CUT    | FLAT, 20 Hz-800 Hz        | This sets the frequency at which the low cut filter begins to take effect. When "Flat" is selected, the low cut filter will have no effect.   |
| HIGH CUT   | 630 Hz–<br>12.5 kHz, FLAT | This sets the frequency at which the high cut filter begins to take effect. When "FLAT" is selected, the high cut filter will have no effect. |

## NS

This effect reduces the noise and hum picked up by guitar pickups. Since it suppresses the noise in synchronization with the envelope of the guitar sound (the way in which the guitar sound decays over time), it has very little effect on the guitar sound, and does not harm the natural character of the sound.

#### **NS Parameters**

| Parameter | Value   | Explanation   |
|-----------|---------|---|
| ON/OFF    | OFF, ON | Turns this effect on/off.   |
| THRESHOLD | 0–100   | Adjust this parameter as appropriate for the volume of the noise. If the noise level is high, a higher setting is appropriate. If the noise level is low, a lower setting is appropriate. |
|           |         | * High settings for the threshold parameter may result in there being no sound when you play with your guitar volume turned down.   |
| RELEASE   | 0–100   | Adjusts the time from when the noise suppressor begins to function until the noise level reaches "0."   |

## S/R (SEND/RETURN)

These are settings for the EFFECT LOOP (SEND/RETURN) jacks.

| Parameter    | Value                 | Explanation   |
|--------------|-----------------------|---|
| ON/OFF       | OFF, ON               | Turns this effect on/off.   |
| POSITION     | POST AMP, POST<br>REV | Specifies the position at which the external effect unit is connected within the KATANA's effect chain. |
| MODE         | SERIES, PARALLEL      | Specifies whether the external effect unit is connected in series or in parallel.                       |
| SEND LEVEL   | 0–100                 | Adjusts the volume of the output to the external effects device.  |
| RETURN LEVEL | 0–100                 | Adjusts the volume of the input from the external effects device.                                       |

<sup>\*</sup> The S/R setting is valid if a plug is connected to the RETURN jack.
